

Food Blades For Food Processing Industry

More Reliable Industrial Blades

Food processing blades & knives are used for cutting operations such as chopping, slicing, dicing, peeling. Selecting the correct materials for food cutting operation is extremely important in food processing due to the acidic nature of food leading to faster wear of the steel, and potentially leading to contamination of the food with the oxidation build-up on the blade surface.

Our knives for food processing applications are made of the finest material. Depending on the application, the blades are made of different steel grades to improve performance in terms of sharpness, durability and anti-rust, thus increasing productivity and blade life. When you need the right converting knives & blades to do the job quickly and precisely, Metal Industrial Blade has you covered!

Before 2023, Metal have been providing blade support services for Chinese domestic export trading companies and equipment exporters, with our products reaching over 80 countries worldwide. To expedite the company's growth, starting in 2023, we established an International Trade Department to directly serve our international clients.

Bread slicer blades

We supply bread slicer blades for bakeries and industrial machines. Our blades are manufactured by high-tech automatic production lines: from steel coil to packed bread slicer blades in a single process. The cutting geometry is ground on highly precise equipment to ensure optimum quality of cuts. The burr is removed to ensure the longest lifetime and least amount of contamination.

Poultry Processing Blades

Our poultry processing blades are made of high-quality materials for superior cutting performance. The sharp edge of the blade ensures quick and precise cutting, making poultry processing more efficient. The blades also have excellent corrosion resistance. This ensures that hygiene standards are maintained during chicken processing and reduces the risk of cross-contamination.
